

SRI KOGANTI

Senior Cloud/DevOps Engineer

CONTACT

- koganti.sharma@gmail.com
- +353868922991
- Cork, Ireland T23 RDC2

EDUCATION

09/2012

**Master of Engineering -
Embedded Systems**

Munster Technological University
Cork, Ireland.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- Certified Kubernetes application developer - CKAD

PROFESSIONAL SUMMARY

Senior Cloud/DevOps Engineer with 13+ years architecting and operating large-scale AWS infrastructure — specializing in Kubernetes, Terraform-driven automation, multi-region high-availability/disaster-recovery design, and SRE practices (SLIs/SLOs, observability, incident response). AWS Certified Solutions Architect with a track record of cutting operational overhead through Python automation, and more recently, hands-on experience applying LLM/GenAI tooling (LangChain, OpenAI and GitHub Copilot APIs) to production engineering workflows.

COMPETENCIES

AI/LLM Engineering (LangChain,
RAG)
LLM APIs (OpenAI, GitHub Copilot)
AWS (Solutions Architect Associate)
Kubernetes
Terraform
CI/CD (Jenkins, GitHub Actions)
Monitoring & Logging (Datadog,
Splunk, Grafana/Prometheus)
OpenTelemetry (OTEL)
Python
Docker
Ansible
Git
Jira

WORK HISTORY

Senior Cloud Engineer
Fidelity investments | Galway, Ireland

02/2023 - Current

- Architected and maintained enterprise-grade Kubernetes infrastructure on AWS for Mend SCA and Mend Renovate, ensuring secure, scalable, and highly available environments across multiple workloads.
- Designed and implemented an active-active architecture for Mend SCA, delivering high availability, improved resilience, and zero-downtime failover across regions.
- Designed and implemented a multi-region Akamai → AWS CloudFront Disaster Recovery (DR) architecture, enabling seamless failover and achieving 100% success across all DR exercises.
- Supported Fidelity's large-scale GitHub Cloud Platform powering 50,000+ active repositories, ensuring availability, performance, and secure access for enterprise-wide development teams.
- Delivered cloud automation using Terraform, enabling consistent, secure, and policy-compliant provisioning of AWS resources across accounts and environments.
- Developed end-to-end automation using Python, including GitHub Apps integrations, event-driven workflows, repository governance tooling, and platform compliance automation.
- **Designed and implemented an AI-driven mass onboarding pipeline for SonarQube, orchestrating parallel repository cloning, automated primary-language detection, and GenAI-powered build/coverage-command generation via the GitHub Copilot API — enabling repositories to be onboarded at scale with user-tunable, override-capable build configurations.**
- **Engineered a prompt-orchestration layer ("injected skills") around the Copilot API to programmatically infer per-repository build and test commands across heterogeneous codebases, removing manual build-configuration effort as a bottleneck to onboarding.**
- Engineered an event-driven ServiceNow-based repository transfer automation pipeline, reducing

manual operational overhead and eliminating classification-related errors.

- Designed and implemented an automated self-service GitHub repo archival solution, reducing on-call load by 80%.
- Designed and implemented a microservice-based architecture to serve recently updated ITAM IDs, improving data availability and operational efficiency.
- Built and operated a high-throughput, low-latency webhook delivery platform leveraging GitHub Apps for mission-critical engineering workflows.
- Designed an automated test harness for webhook delivery infrastructure, improving reliability, reducing false alerts, and strengthening overall production readiness.
- Implemented repository governance automation to detect large binaries, excessive branches, compressed artifacts, and oversized repositories, improving platform hygiene and reducing storage inefficiencies.
- Served in on-call rotation supporting GitHub Platform and internal automation services, ensuring high availability and rapid incident response for core developer tooling.
- Enhanced platform observability by instrumenting automated monitoring, alerting, and health checks for webhook infrastructure and GitHub platform services.
- Applied SRE principles—including SLIs, SLOs, error budgets, and operational reviews—to reduce incidents and strengthen system resilience.
- Led enterprise-wide secure coding and secrets-management workshops, training engineering teams on preventing credential leaks using pre-commit hooks and secure development practices.
- Streamlined identity and access governance by integrating GitHub Teams with Azure Active Directory, establishing consistent RBAC, strong auditability, and automated lifecycle management.
- Participated in the organisation-wide TechX Lion's Den innovation programme and advanced to the finalist stage.

- Active member of Innovation council and responsible for new innovation stories page.

DevOps Engineer **TrustAp** | Cork, Ireland

- 12/2021 - 01/2023*
- Designed and implemented Infrastructure from ground up to support development teams for deployments in AWS using Terraform.
 - Implemented CI process with Jenkins.
 - Designed and implemented End to End testing framework in collaboration with QA team. This framework had laid the foundations for automation and decreased the testing time by 50%.
 - Designed and implemented service orchestration process using Ansible to deploy Dockerized services to servers.
 - Designed and implemented logging and monitoring solutions for dockerized services architecture.
 - Documented project design for reference and future use cases.
 - Worked with cross-functional design teams to create software solutions that improved overall functionality and performance.
 - Researched and identified new technologies to use in agile development environment..

Senior Software Engineer **Optum (United Health Group)** | Letterkenny, Ireland

- 03/2021 - 12/2021*
- Responsible for implementing cloud security solutions that balance simplicity, standards, scalability, extensibility, supportability.
 - Designed, build and automate security endorsement process, by centralizing security telemetry from both external tools like (Prisma, Rapid7 etc) and internal cloud native tools (**AWS Inspector, AWS GuardDuty** etc .)

Software Developer **Trurisk** | Dublin, Ireland

- 11/2020 - 03/2021*
- Responsible for setting up cloud infrastructure in **AWS** using **cloud formation templates** and

Developing API's in Python for strategic insurance solutions.

- Designed and developed face matching and format conversion applications in **AWS** using **Cloud formation Templates** for Deploying **Docker** container as lambda.

DevOps Engineer II **Forcepoint** | Cork, Ireland

- 08/2019 - 10/2020*
- Responsible for developing and maintaining automated solutions for Cloud services infrastructure, build and delivery pipelines and monitoring the cloud infrastructure.
 - Created and maintained semi automated CI/CD pipelines for code delivery using Jenkins.
 - Designed and developed automation process for end to end test infrastructure deployment on **AWS** using **Terraform** which brought down the E2E test duration from 90 minutes to 30 minutes.
 - Automated the process of 3rd party software packages licences generation for compliance.
 - Designed and automated Tenant onboarding process using **Docker** in **AWS (ECS)**

Software Engineer II **Forcepoint** | Cork, Ireland

- 09/2018 - 08/2019*
- Responsible for developing cloud based reporting service.
 - Participated in Yearly Hackathon and won **Most Innovative Idea title.**
 - Developed Restful API's in Python.
 - Developed IAC scripts in **Terraform** for deploying Resources in AWS.
 - Developed automation scripts in Python to quickly add new endpoints to base path existing in Api-gateway.
 - Developed an automated solution in Python to host swagger documentation of all services in one place using Git-hub pages.

Python Developer
Vearsa | Cork, Ireland

- 08/2016 - 07/2018*
- Responsible for developing robust, scalable and secure E-book sales tracking platform using Python.
 - Experience in AWS services like EC2, S3, EBS, RDS, Route 53, CloudWatch, Kinesis, Athena, SNS, SES and SQS.
 - Developed automated report download engine using Scrapy.
 - Developed spiders to scrape data from websites using Scrapy.
 - Developed Analytics engine for data analysis using Pandas.

Software Developer
ODG Technologies | Cork, Ireland

- 06/2013 - 06/2016*
- Responsible for developing robust software for innovative public safety products with industry leading performance.
 - Developed radiation monitoring device that records radiation level in the environment, push data on to SD card and then to S3 Bucket.
 - Developed GUI interfaces (Python) for breath monitoring medical device and for automating firmware downloading process and data logging.
 - Implemented automatic error logging system to update assembly line process parameters for post-process analysis.
 - Developed moisture level monitoring device that records moisture level on patient and transmits data to mobile app.
 - Developed Metal detection algorithm for Metal detector and enhanced metal detection range from 50 mm to 70mm by implementing process-based algorithm.

PERSONAL PROJECTS

Career Assistant - RAG-Based Resume Assistant

Jun 2026 - Present

- Built a Retrieval-Augmented Generation (RAG) service in Python using LangChain, ChromaDB, and the OpenAI API, enabling natural-language Q&A over resume documents with PDF/DOCX/TXT ingestion.
- Designed a section-aware document ingestion pipeline — custom loader, resume-aware chunker, and Presidio-based PII redaction — feeding a FastAPI service with async REST endpoints for ingestion and retrieval-augmented querying.
- Containerized the full stack (FastAPI + ChromaDB) with Docker Compose and built a GitHub Actions CI/CD pipeline (ruff lint/format, mypy static typing, pytest, Docker image build) enforced on every push.
- Actively extending the fixed retrieve-then-generate pipeline into a tool-calling agent loop (LLM-driven routing between resume search and clarifying-question tools) as ongoing hands-on agentic-AI upskilling.
